## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

### ***Election/Restrictions***

2. After careful reconsideration of this application, the species appear to be obvious variants because disclosed adhesion inducing-agents are known in the art for promoting adhesion. Therefore the species restriction in Paper No. 8 is withdrawn. Accordingly, claims 1-20 and 30-36 are currently pending and considered in this office action.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-20 and 30-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pinchuck (5,628,788) in view of Sawhney (6,605,294) and Ken (6,113,629). Pinchuck discloses a stent graft. Although, Pinchuck does not disclose the stent-graft releasing an agent which induces the in vivo adhesion, as claimed, attention is directed to the Sawhney and Ken references: Sawhney reference discloses preventing a stent graft from migration by coating hydrogel on the stent grafts surface and the hydrogel including agents that induce adhesion; Ken discloses a hydrogel

comprising an agent, which induces the in vivo adhesion, as claimed. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to coated hydrogel as disclosed by Sawhney or Ken onto the stent graft of Pinchuck in order to adhere the stent-graft to the blood vessel wall and prevent the migration of the stent-graft.
